

# Travel Planner App UI (Roamly)

## Overview

### Problem Statement

Planning a trip can often feel overwhelming, especially for independent travelers or families seeking flexibility. Currently, users rely on multiple disconnected tools, such as:

- Google Maps for directions
- AccuWeather for forecasts
- Excel sheets or note-taking apps for creating plans
- Instagram or Pinterest for discovering places

This scattered process leads to:

- Time wasted switching between platforms
- Incomplete or unorganized itineraries
- Missed opportunities to discover local attractions
- Frustration when the weather impacts planned activities last minute

Travelers lack **one unified platform** that allows them to **create, customize, and adapt** their itineraries with real-time information like weather and maps, particularly something that's **mobile-first and beginner-friendly**.

"I just want to enjoy my trip, not spend hours switching between apps to check the weather, maps, and notes. I wish there was just one app that lets me plan it all."

| — *Emma, 27, solo traveler from Berlin*

## Scenario

Emma is planning a 7-day solo trip to Vietnam. She uses Instagram to find cafes, a Notes app to write daily plans, Google Maps to save locations, and a weather app to check the monsoon season. After switching between five different tools, her itinerary ends up disorganized, one activity is 3 hours away from the next, and she misses a key hike due to rain. She wishes there were one simple app that could help her rearrange and update plans instantly, even offline.

## Goal

To design a **delightful, responsive, and mobile-first travel planner app** that enables users to:

- Build customizable day-by-day itineraries
- Access **real-time weather forecasts** for each destination
- Explore and add activities using an **interactive map UI**
- Save, share, or export their travel plans
- Use the app without creating an account (for MVP)

The design will prioritize **clarity, ease-of-use, and emotional delight** through intuitive UX, smooth flows, and engaging micro interactions, creating a stress-free planning experience even for non-tech-savvy users.

## My Role

- UX Researcher
- UX/UI Designer
- Prototype Creator
- Presenter

## Tools

- Figma (wireframes, prototype, UI)
- Miro (brainstorming, journey map)
- Google Forms (survey)
- Notion (documentation)

## Timeline(Gantt chart)

Task	Week 1	Week 2	Week 3

## Research

### Personas

#### User Persona 1: Ayesha Malik

- **Name:** Ayesha Malik
- **Age:** 23
- **Occupation:** University Student
- **Location:** Colombo, Sri Lanka
- **Travel Style:** Solo, spontaneous, budget-conscious
- **Tech Comfort:** High (uses multiple apps, social media savvy)

## Bio

Ayesha is a university student who travels solo during semester breaks. She's adventurous and loves exploring local spots, cafés, and scenic routes on a tight budget. While she's tech-savvy and loves capturing content for Instagram, she finds travel planning tiring because it involves jumping between multiple apps.

## Goals

- Discover affordable, local attractions and hidden gems
- Plan and edit her travel itinerary quickly on the go
- Feel safe and in control during solo trips
- Be able to save plans offline when internet isn't available

## Pain Points

- Has to use 4–5 apps to manage a single trip
- Cannot easily adjust plans when the weather changes
- Feels overwhelmed with disorganized travel info and ideas

## Motivations

- Experience new cultures independently
- Keep her plans flexible and stress-free
- Curate content for her travel blog and social media

*"I like planning my trips on the go — but I don't want to open five apps just to decide what I'm doing tomorrow."*

*Here's a visual version of Ayesha's persona based on the research insights.*

**AYESHA MALIK**

**Age:** 23

**Occupation:** University Student

**Location:** Colombo, Sri Lanka

**Travel Style:** Solo, spontaneous, budget-conscious

**Tech Comfort:** Very High (loves planning tools and apps)

 **Bio**

Ayesha's persona

## User Persona 2: Imran Shah

- **Name:** Imran Shah
- **Age:** 35
- **Occupation:** Senior Software Engineer
- **Location:** Dubai, UAE
- **Travel Style:** Family vacations, structured and time-efficient
- **Tech Comfort:** Very High (loves planning tools and apps)

### Bio

Imran is a father of two and a senior software engineer. He travels with his wife and kids during holidays and prefers trips that are well-organized and predictable. He usually plans in advance, often creating Google Docs and spreadsheets to map out his travel days. He needs something smarter and centralized — especially when bad weather throws the itinerary off.

## Goals

- Build organized, day-by-day plans that accommodate kids
- Avoid weather issues affecting scheduled activities
- Reduce time between activities to avoid toddler exhaustion
- Keep all trip details shareable with his wife

## Pain Points

- Weather changes ruin pre-booked activities
- Frustrated using separate apps for weather, plans, maps
- Sharing the trip plan with family is clunky or requires export

## Motivations

- Create stress-free, family-friendly travel experiences
- Avoid last-minute surprises and over-traveling
- Keep his kids engaged with meaningful, safe activities

*“I want one app that gives me control — weather, map, plans — so I don’t have to keep explaining things to my wife and kids.”*

*Here's a visual version of Imran's persona based on the research insights.*

## IMRAN SHAH

**Age:** 35

**Occupation:** Software Engineer

**Location:** Dubai, UAE

**Travel Style:** Family vacations,  
structured and time-efficient

**Tech Comfort:** Very High (loves  
planning tools and apps)

### Bio

### Motivations

- Create stress-free, family-friendly travel experiences
- Avoid last-minute surprises and over-traveling
- Keep his kids engaged with meaningful, safe activities

*"I want one app that gives me control — weather, map, plans — so I don't have to keep explaining things to my wife and kids."*

Imran's Persona

## Pain Points

- **Overwhelming Information** – Too many travel options make it hard to choose.
- **Connectivity Issues** – Tourists may not always have stable internet (need offline maps).
- **Language Barriers** – Difficult to understand local guides or places without translations.
- **Booking Confusion** – Complex forms discourage users; they prefer a quick booking flow.
- **Trust Issues** – Users fear fake reviews or unreliable property listings.
- **Navigation Stress** – Tourists worry about getting lost in a new city.
- **Hidden Costs** – Unexpected charges during booking frustrate users.

## Competitor Analysis

Competitor	Strengths	Weaknesses
Google Travel	Smart autosuggestions, map integration	Not customizable, poor trip overview
TripIt	Easy itinerary management	Old-fashioned UI, no real-time weather

Competitor	Strengths	Weaknesses
Rome2Rio	Strong transport mapping and route calculation	No itinerary saving, lacks full user control
Wanderlog	Beautiful UI, team trip planning, drag/drop feature	Requires sign-up, can be buggy on Android

## Feature List (MVP)

### Core Features (Must-Have for MVP)

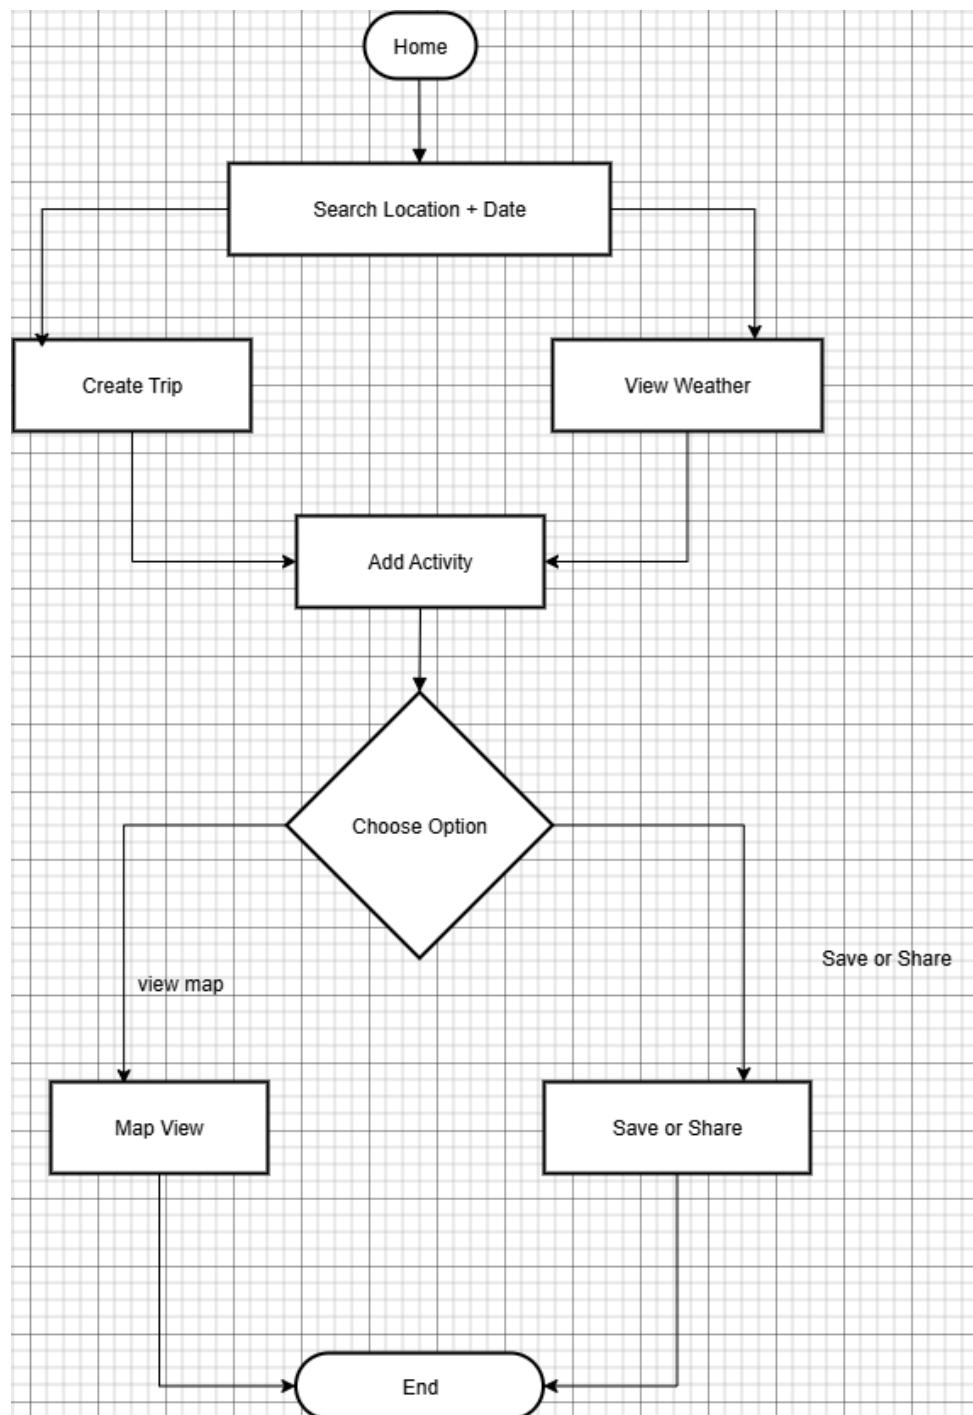

Feature	Description
Home screen with search	Users can enter destination and travel dates
Add/edit activities per day	Users can create a day-by-day itinerary with custom activities
Weather info per location/day	Real-time weather forecast shown for each day and destination
Basic map showing activity points	Map displays pins or routes of selected activities per day
Save trip to local device (no login)	Plans can be saved without signing in — ideal for fast, anonymous usage

### Optional Features (Post-MVP Enhancements)

Feature	Description
Shareable trip link	Allows users to send their travel plan to others via a link
Invite collaborators to edit	Enables shared planning with friends, couples, or family members
Export itinerary as PDF	Lets users download or print their travel plan for offline use

## ▼ User Flow & Wireframes

# User Flow Diagram

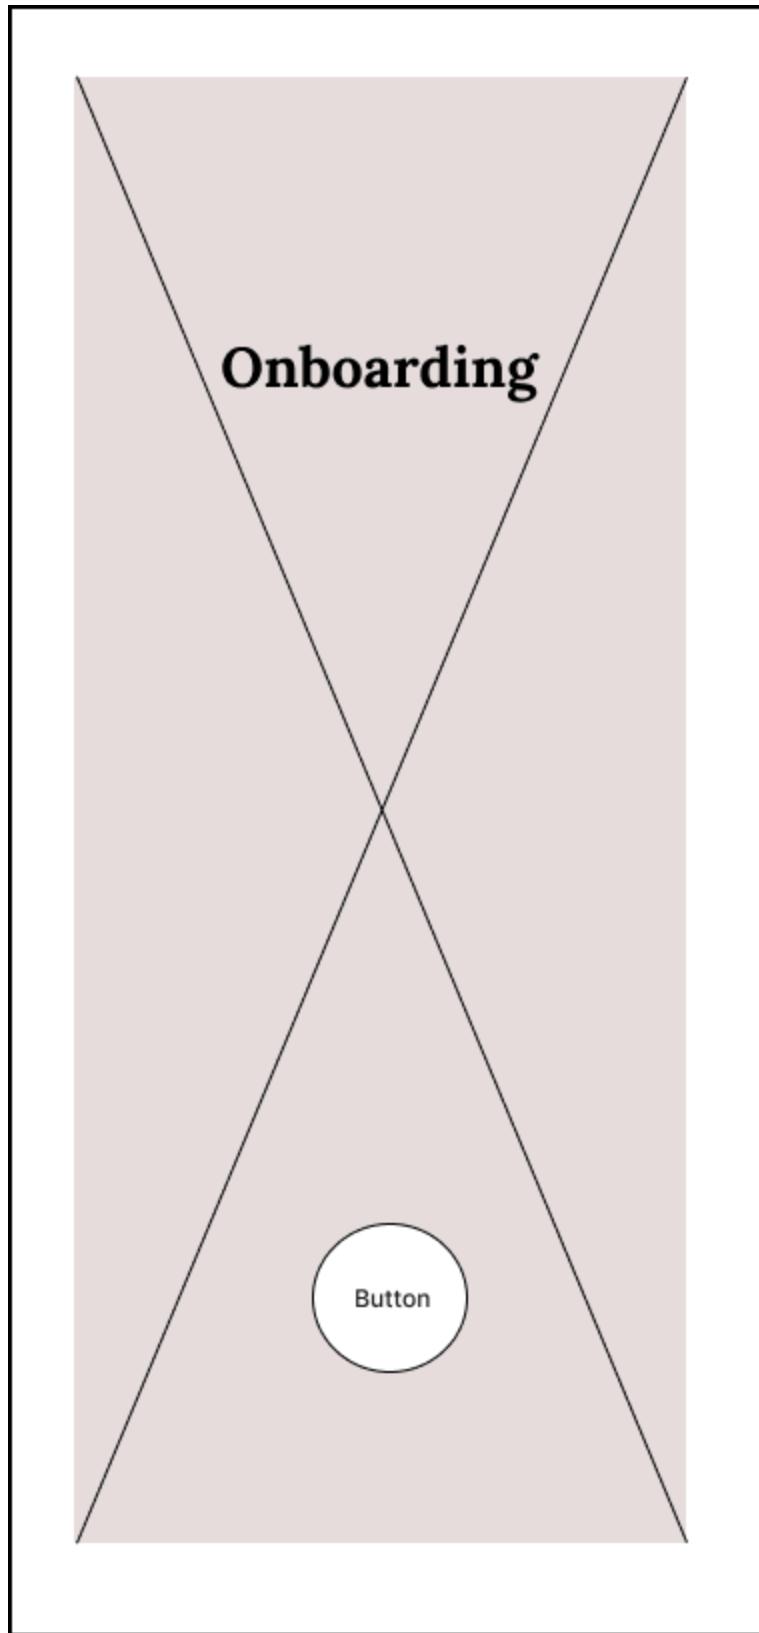

User Flow Diagram of Traveller Planner App

This user flow diagram illustrates the key steps a traveler takes in the Roamly app to plan a trip. Starting from the home screen, the user searches for a destination and travel dates, creates a trip, and adds activities to their itinerary. Optional paths include checking the weather forecast or viewing planned activities on a map before saving or sharing the final itinerary.

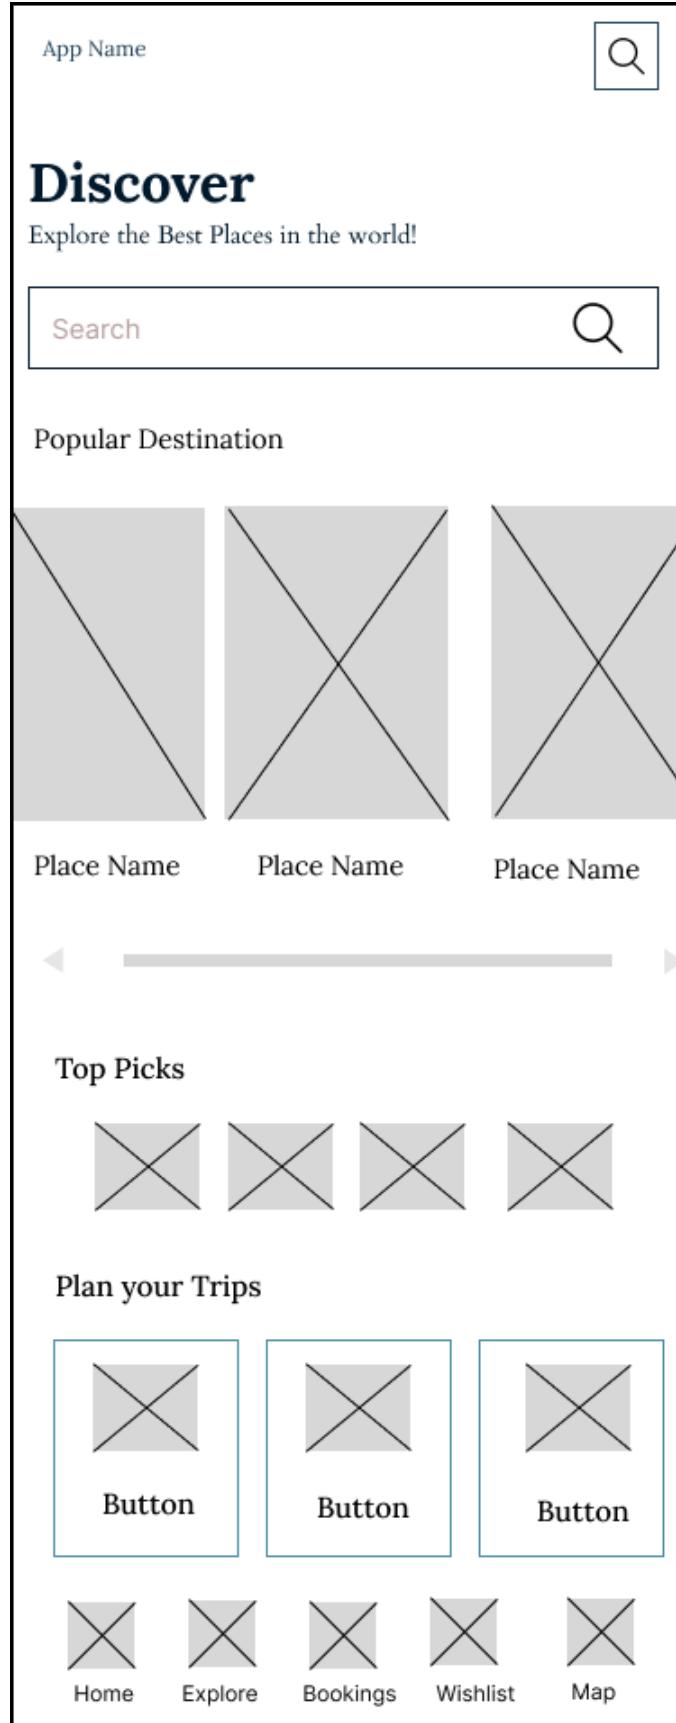

The flow ensures a **clear, logical journey** that minimizes friction and supports **fast, mobile-first trip planning**.

## My Bookings

The image shows a mobile application interface for 'Roamly'. At the top, there is a search bar with a magnifying glass icon. Below the search bar are three buttons: 'Upcoming' (light blue), 'Completed' (dark blue), and 'Cancelled' (dark blue).  
  
The first booking card is for 'Bali, Indonesia'. It features a large image of a traditional Balinese temple (Pura) at sunset. Below the image, the text 'Bali, Indonesia' is displayed. To the right of the text are three status buttons: 'Confirmed' (yellow), 'Reschedule' (green), and 'Cancel' (brown). Below these buttons, travel details are listed: 'Nov 2 – Nov 8, 2025', 'Hilton Bali | 6 Nights', and '\$850 | Paid'.  
  
The second booking card is for 'Paris, France'. It features a large image of the Eiffel Tower at sunset. Below the image, the text 'Paris, France' is displayed. To the right of the text are three status buttons: 'Pending' (pink), 'Reschedule' (green), and 'Cancel' (brown). Below these buttons, travel details are listed: 'Oct 10 – Oct 15, 2025', 'Novotel Paris | 5 Nights', and '\$1200 | Paid'.  
  
At the bottom of the screen, there is a navigation bar with five icons: 'Home' (house), 'Explore' (globe with arrows), 'Bookings' (book), 'Wishlist' (heart), and 'Map' (location pin). The 'Bookings' icon is highlighted with a blue background.

## Prototype (UI) Link

[https://embed.figma.com/proto/O9fwYfoTuEV7z1OC0zKpea/traveller-planner-app?node\\_id=0-1&t=22FMavkjow7NMNd1-1&embed-host=notion&footer=false&theme=system](https://embed.figma.com/proto/O9fwYfoTuEV7z1OC0zKpea/traveller-planner-app?node_id=0-1&t=22FMavkjow7NMNd1-1&embed-host=notion&footer=false&theme=system)

## Impact

The Traveler Planner App design aimed to simplify the way users plan their trips — combining destination discovery, itinerary creation, and weather insights into one smooth mobile experience.

Through the research and design process, I was able to:

- Understand **real user pain points** around fragmented travel planning (using multiple apps for maps, notes, and booking).
- Create a **mobile-first interface** that feels intuitive and visually engaging for all types of travelers.
- Improve **user confidence** and **reduce planning stress** through clear navigation and clean layout.
- Present a **unified flow** — from discovering destinations to managing a personalized itinerary — that feels consistent and modern.

Overall, the project helped demonstrate how thoughtful UX design can directly enhance **usability, engagement, and satisfaction** for everyday travelers.

## Reflection

This project deepened my understanding of the **UX design process from research to prototyping**.

Some key takeaways:

- **User interviews and empathy mapping** helped me design features that address real travel challenges (budget tracking, scheduling, and collaboration).
- Balancing **aesthetic design and functional simplicity** was a challenge — especially to make the UI both attractive and easy to use on mobile screens.
- I learned the importance of **information hierarchy** — clear visuals, typography, and spacing greatly improved comprehension.
- Conducting **usability testing** highlighted minor navigation issues that were later simplified in the final prototype.
- This project strengthened my skills in **user-centered thinking, wireframing, and prototyping tools (like Figma)**.

Even though I didn't build the app technically, I focused on how **UX decisions influence overall product experience** — something crucial for real-world design teams.

## Future Enhancements

If I continue developing this project, I plan to:

- Add **real-time travel data** integration (maps, weather, currency, transport schedules).
- Include a **community feature** where travelers can share experiences and trip plans.
- Design a **dark mode** for better usability at night.
- Implement **smart trip suggestions** using AI (e.g., “3-day trip ideas based on your budget and preferences”).
- Create a **responsive web version (PWA)** to make the app accessible without downloads.
- Add **offline mode** so users can access their itineraries even without internet connection.
- Conduct more **usability testing** with frequent travelers to refine navigation flow and accessibility.
